Property Owner
XXX - 12th Street West
Prince Albert, SK, S6V XXX

Dear Resident,

Our records indicate that the water service from your home to the city water main may be made of lead. Lead service lines can increase your risk of exposure to lead through drinking water and should be replaced when possible.

Based on the existing records, the City has preliminarily selected your property for lead service replacement in 2025. Prior to confirming the project the City will need to verify that your water service connection is made of lead (from the watermain to your property). The City will be completing a Hydrovac Excavation by May 31st, 2025 between your property line and the concrete curb of 12th Street West to verify your service material. At this time, additional notice will be provided to verify the findings of the excavation and confirm the lead water service replacement project.

As part of this water service replacement, the City will install a Poly or Copper service line for the City owned portion of the service, from the water main to your property line. The City of Prince Albert strongly encourages you to review and replace the portion that you own, between the property line and your household plumbing, at this time as well. If only one portion of the lead service is replaced, your risk of lead exposure at the tap may temporarily increase. Home owners are encouraged to reach out to the City coordinate the replacement of lead service for the opportunity to reduce costs and improve the final quality of the project.

Trees are an asset to the City and hold important value in our Urban Forest. Where we can, we certainly want to help preserve the city owned trees on boulevards and easements in this process. We will do our best to look at all options in preserving trees and should a tree present an obstacle in the lead line replacement process the removal of the tree would only be considered as a last resort after all options to lead line replacement have been exhausted. Removal of city owned trees will be completed at 'NO' cost to the homeowner and a replacement tree will be provided once all work has been completed and the ground has settled (usually within a year from the work being completed).

If you have any questions about this project, or would like to coordinate the replacement of the lead service on your property please contact:

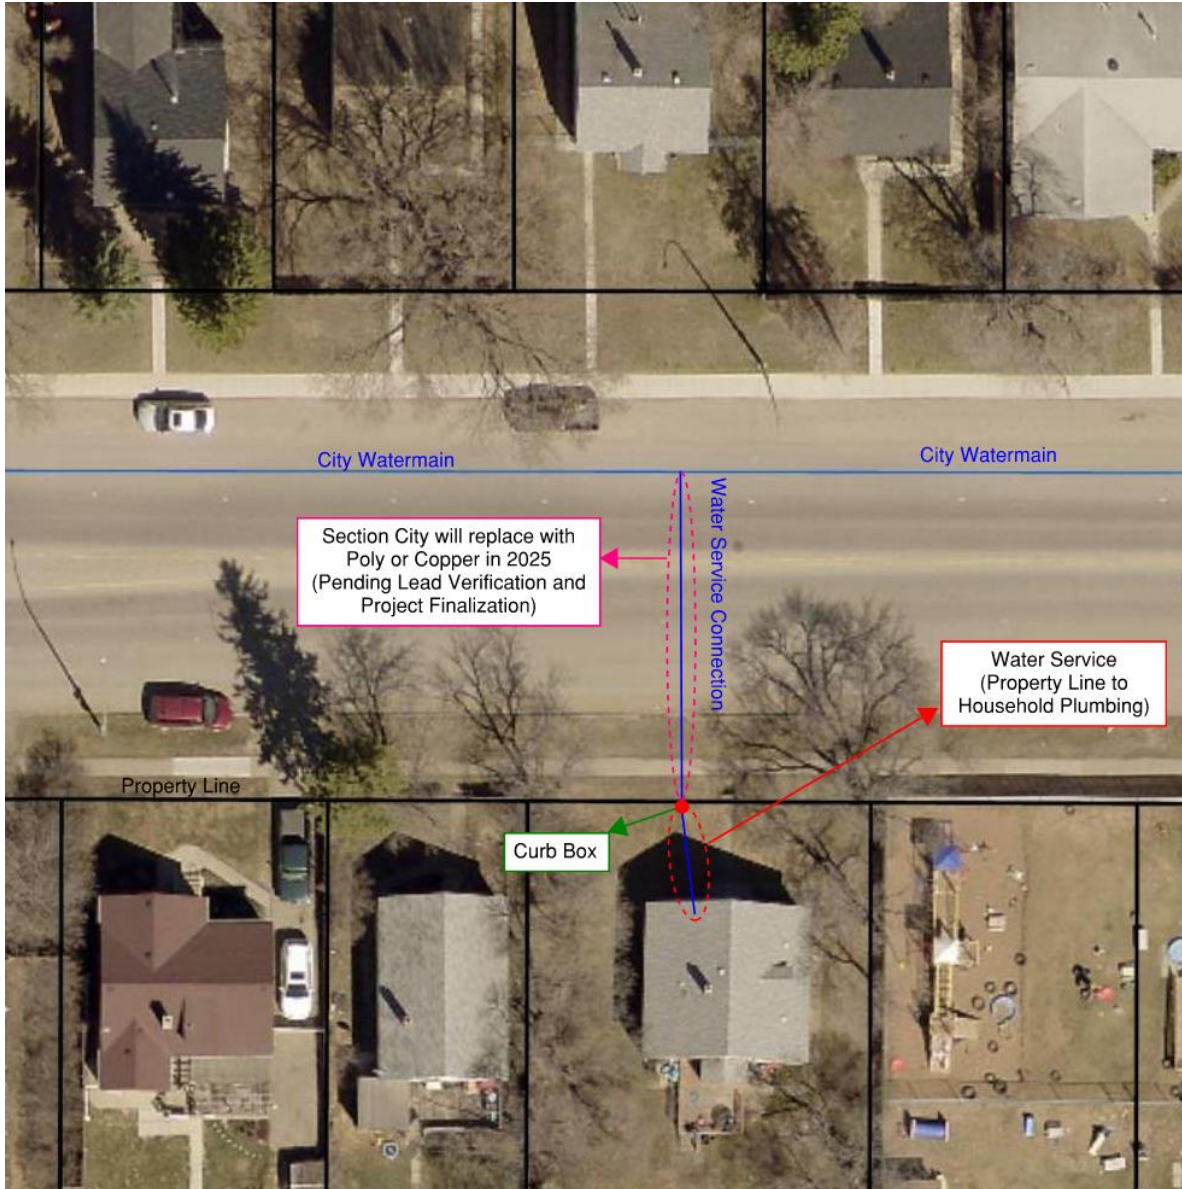

Capital Projects Manager: Evan Hastings
306-953-4884, (available between 7:30 a.m. and 4:30 p.m.) ehastings@citypa.com

Water & Sewer Manager: Geoff Soderberg
